

ARGONNE NATIONAL LABORATORY

OFFICIAL USE ONLY

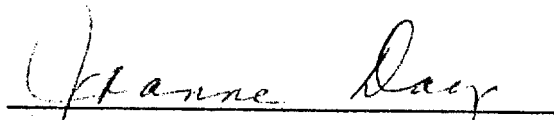

Report on Visit by
P. Ermolov and V. Kaftanov
January 22, 1976

Two Soviet physicists, P. Ermolov, Institute of High Energy Physics, Serpukov, and V. Kaftanov, Institute of Theoretical and Experimental Physics, Moscow, both currently in residence at Fermilab, visited the Laboratory on January 22, 1976, to attend the regularly scheduled High Energy Physics Seminar. The seminar was presented by William Fry, University of Wisconsin, on the subject "Search for Di-Leptons Involving Electrons in Neutrino Induced Reactions in the NAL 15-Foot Bubble Chamber."

They arrived at the Visitor's Reception Center at 10:30 a.m., were met by the principal escort, and taken to Building 362 for the seminar. They later discussed high energy neutrino experiments with M. Derrick and members of the High Energy Physics Division, and left the Laboratory at 3:30 p.m.

Approval for this casual visit was obtained by L. B. Fosdick, Office of the Director.

No classified information was discussed, and no documents or other materials were provided the visitors.

Joanne Day, Principal Escort
